STAFF GUIDE: The RD Fresh "Food Insurance" Program

What is this?

We have upgraded our refrigeration with **RD Fresh**. You will notice new panels and mineral packets mounted inside our coolers. These are not just filters, they are our "Food Insurance" to ensure we serve the freshest ingredients possible.

How it helps YOU (The Team):

- **Better Ingredients:** Produce stays crisp and fresh up to 50% longer. No more wilting lettuce or moldy berries by mid-week.
- **Zero Odor Transfer:** The minerals absorb odors. Your onions won't make the butter or desserts taste like onions.
- **Cleaner Workspace:** The system reduces moisture and bacteria proliferation, keeping our walk-ins cleaner and safer.
- **Less Waste:** You'll spend less time "culling" bad produce and throwing away inventory.

How it Works (The Simple Science):

Fruits and vegetables naturally release Ethylene Gas. Ethylene Gas is what naturally ripens fruits and vegetables, it's also what naturally spoils them. In your closed fridge, this gas builds up and spoils your produce fast.
Our all-natural mineral mix acts like a "sponge" for this gas, trapping it inside the packets so the food stays fresher for up to 50% longer.

Kitchen Do's:

✅ DO keep the area around the RD Fresh panels clear so air can circulate through them.
✅ DO open all packages you can and place products in containers so they can breathe.
✅ DO enjoy the fact that our prep work stays fresher for longer!

Kitchen Don'ts:

❌ DON'T hang anything (towels, bags, or utensils) on the RD Fresh frames.
❌ DON'T spray cleaning chemicals directly onto the mineral packets.
❌ DON'T move or remove the units. They are strategically placed for maximum airflow.

Our Commitment to the Planet 🌎

When these mineral packets are full, they don't go in the trash. They are **100% recyclable**. We return them to the earth as **fertilizer** to help grow the next harvest. This program helps us hit our zero-waste goals!
